aiTemplates-workFlow
(a repository; a clone anywhere)
BISOS-AI-Workflow: the /bx-* commands,
workflow skills, mother/ workflow files,
generic activities --- the same for everyone
aiTemplates-DE
(BISOS's, or an organization's own)
Digital-Ecosystem skills and activities
<base>/aiTemplates-workFlow
[symlink: a sibling (committed)
or per host (gitignored)]
<base>/aiTemplates-DE
[symlink, or a real directory]
aiActivityAssemble.cs --base=<base>
assemblyDiff
assemblyCheck
read only
assemblyUpdate (--workFlow, --de: make the input links)
writes the base
Deep merge:
- directories real in the base
- files: relative links through the input name
- an input's own symlinks reproduced
A path in both inputs: refused
The base's own files: never touched
An input's root files (LICENSE, AI-*.org):
its repository's, ignored
Manifest: .aiActivityAssembled
assembles
<base> (an ai-templates directory)
mother/, <activity>/ [generated links]
its own README.org, AI-*.org [untouched]
Bases:
- bxObjects/aiActivityTemplates, with its
inputs as committed sibling links
(clone the three repos side by side);
on BISOS, /bisos/apps/defaults/ai-templates
is a link to it
- a fork: its own aiTemplates-DE,
the workflow linked per host
a project (aiActivity.cs initiate)
AI-WORKFLOW.org, AI-Activity.org, .claude/{commands, skills}
[symlinks into the base]
solid = written by the assembler
dashed = symlink
workflow; the base
an ecosystem's input
